

Press Release

Cont. from page 1

The Mercury line is over 25 products strong with the CA line consisting of, Thin viscosity M5T, Medium viscosity M300M and Gap filling M1100G formulas.

The Mercury Foam compatible, low Odor CA product is simply the best in the industry and is available in both M100F Medium, M1000 Thick viscosities.

Mercury also offers a Flexible M3500FL rubber-toughened CA, as well as M68DB Debonder and MH16 Accelerator. A complete line of epoxies, finishing resins and thread lockers all in unique dispensers and various sizes round out the Mercury line. Many more products are underdevelopment and watch at SEFF for further announcements.

User Accolades

“I have had the pleasure of building for many of the top TOC pilots. During these years I have used just about every type of adhesive known to modeling and must say that the Mercury Adhesives products are by far the best adhesive system I have ever used.

The purity and stability is second to none and the ingenious pin-in-cap nozzle and cap closure assures that the nozzle is always clean and open. Since using this system I have never experienced a clogged nozzle like I have with just about every other brand I have used.

Great cap design and along with this I get the fastest and strongest CA’s I have ever used.”

A.J. Lee, Professional Model Builder

Testimonial

“I use Mercury adhesives exclusively when assembling our prototype and display/show aircraft. These aircraft must stand up to season after season of use and abuse, and I trust Mercury products to provide long lasting bonds in high stress areas. I’ve used all other brands over the years and I’ve found Mercury to be a superior product. Each product has been developed and tested to provide the best bond possible for a particular application, and the Mercury team has gone above and beyond to educate the consumer about which formula is best for their specific needs. This is really a top notch product backed by a team of knowledgeable professionals.”

Chris Hinson, President, Extreme Flight RC

Testimonial

“As the owner and operator of Custom Airframes, I am the designer and builder of many top award winning pattern airframes. To successfully build these high-end aircraft a scientifically engineered adhesive system is required for maximum strength and minimal weight. Over the years I have used many different adhesives, and Mercury Adhesives is by far the purist, strongest, and lightest system I have used.

Mercury Adhesives have also solved the everlasting mystery of the “clogged nozzle” with their great pin-in-cap design. Since using their cap and nozzle design I have never experienced a clogged nozzle. “

Mike Hester, Designer of the Black Magic, Owner Custom Airframes

About Mercury Adhesives

Mercury is a privately held LLC corporation located in Cumming, GA. Mercury is sold direct to retail outlets and not direct to consumers. Dealers can order direct to ensure the highest profitability. The Mercury mission is to manufacture and distribute the highest quality Scientifically Engineered adhesives to dealers around the globe. More info is available at www.mercuryadhesives.com
